

Kurtis Rodrigue

As I say every time with these projects, I spent a lot more time than last week. I am very thankful that we got the extension and I was able to take my time learning how classes worked, instead of cramming it all last minute.

I did my menu kind of weird, but it works to test the functionality of the class functions. A quick guide is you select whether you would like to use the first two words (cat, dog) or the array of words. Then depending on what you choose, it'll allow you to do different things. However, due to the fact that I didn't want to cram that much code into main, I made it so you could only copy word2 into word one, and etc. with other functions.

Again, as I said before, Spencer's review session helped me a ton, and I am glad I was able to make it.

I had some issues with copying and concatenation, but after a while of looking at it, I was just forgetting to iterate temp, so it all worked out in the end. I had no problem with compare, assuming I did the right thing.

I don't really have much else to document, I enjoyed the programming assignment as always.
