Kurtis Rodrigue

I spent 90% of my time on overloading operators, which I know was the intent on the project. I had no idea if it was my multiplication operator or my assignment operator. After hours of debugging, I figured out it was a mixture of both. It was inconsistency in how I was initializing degrees. I finally got everything sorted, and it all worked out. So yet again I spent a ton of time fixing something really small. But her, that's what CS is about, am I right?
